## XE Chassis

MicroTesla is proud to have released the XE Chassis in 2013. The XE Chassis is the next step in the evolution of MicroTesla's directional instrument chassis development.

The directional steering instrument chassis provides a stable mount for the various sensing devices, like accelerometers and magnetometers. It also provides protected wiring pathways for the board and device wiring. Ideally, all of the sensing devices (accelerometers and magnetometers) are covered to protect them from environmental damage.

The XE Chassis is the strongest chassis ever designed by MicroTesla. The sensitive axis alignment and permanent mounting of the accelerometers and magnetometers are also improved in the XE Chassis.
